Modeling

March 20, 2013

Tim Bergsma

1 Purpose

This script runs NONMEM models and diagnostics for sample phase1 data.

2 Model Development

2.1 Set up for NONMEM run.

Listing 1:

```
> #Be sure to set directory to the script directory that contains this file.
> library(metrumrg)
> #command <- '/opt/NONMEM/nm72/nmqual/autolog.pl'
> cat.cov='SEX'
> cont.cov=c('HEIGHT','WEIGHT','AGE')
> par.list=c('CL','Q','KA','V','V2','V3')
> eta.list=paste('ETA',1:10,sep='')
```

2.2 Run NONMEM.

Listing 2:

```
> NONR72(
+      run=1001:1005,                          # 5 models, ctl pre-written
+      #command=command,                       # this version will search for NONMEM
+      project='../nonmem',                    # must specify, unless ctl in getwd()
+      grid=TRUE,                             # set to FALSE for better error
    messaging (but slower)
+      nice=TRUE,                              # don't delete subversioned
    directories
+      checkrunno=FALSE,                       # TRUE auto-replaces conflicting run
    numbers
+      cont.cov=cont.cov,                      # see help for following
+      cat.cov=cat.cov,
+      par.list=par.list,
+      eta.list=eta.list,
+      grp='SEX',                              # separate diagnostic plots for each
    level of SEX
+      grpnames=c('female','male'),            # use these instead of 0, 1, when
    plotting by SEX
+      include.all=TRUE,                       # also show diagnostics with groups
    combined
+      plotfile='../nonmem/*/*.pdf',           # use the run dir and run name for the
     plot file
+      streams='../nonmem/ctl'                 # expect the control streams here, not
     locally
+ )
```

```
Installing SIGCHLD signal handler...Done.
```

Listing 3:

```
> progress(1001:1005,project='../nonmem')

       queued      compiled       running          done indeterminate
            3             0             0             2             0
```

Listing 4:

```
> follow(1001:1005,project='../nonmem')

       queued      compiled       running          done indeterminate
            3             0             0             2             0
       queued      compiled       running          done indeterminate
            0             3             2             0             0
       queued      compiled       running          done indeterminate
            0             0             3             2             0
       queued      compiled       running          done indeterminate
            0             0             2             3             0
       queued      compiled       running          done indeterminate
            0             0             0             5             0
```

Listing 5:

```
> Sys.sleep(10)                              #wait briefly to ensure all processes
    complete
```

Covariance succeeded on model 1005. We confirm that we can get similar results with different initial estimates.

3 Predictive Check

3.1 Create a simulation control stream.

Convert control stream to R object.

Listing 23:

```
> ctl <- read.nmctl('../nonmem/ctl/1005.ctl')
```

Strip comments and view.

Listing 24:

```
> ctl[] <- lapply(ctl,function(rec)sub(' *;.*','',rec))          # read control
    stream into a list
> ctl                                                            # print it like
    text
```

 [6] "error"      "theta"      "omega"      "sigma"      "estimation"
[11] "cov"        "table"      "table"
```

Listing 27:

```
> names(ctl)[names(ctl)=='theta'] <- 'msfi'                   # replace theta
    with final msfi
> ctl$msfi <- '=../1005/1005.msf'
> ctl$omega <- NULL                                           # drop omega,
    sigma
> ctl$sigma <- NULL
> names(ctl)[names(ctl)=='estimation'] <- 'simulation'        # simulate
    instead of estimate
> ctl$simulation <- 'ONLYSIM (1968) SUBPROBLEMS=500'
> ctl$cov <- NULL                                             # drop covariance
     step
> ctl$table <- NULL                                           # replace
    multiple tables with one
> ctl$table <- NULL
> ctl$table <- 'DV NOHEADER NOPRINT FILE=./1105.tab FORWARD NOAPPEND' # only
    really need DV, save file space
> write.nmctl(ctl,'../nonmem/ctl/1105.ctl')
```

3.2 Run the simulation.

This run makes the predictions (simulations).

Listing 28:

```
> NONR72(
+       run=1105,
+       #command=command,
+       project='../nonmem',
+       grid=TRUE,
+       nice=TRUE,
+       diag=FALSE,
```

```
+       streams='../nonmem/ctl'
+ )
> follow(1105,project='../nonmem')
```

```
       queued      compiled       running          done indeterminate
            0             0             0             0             1
       queued      compiled       running          done indeterminate
            0             0             0             0             1
       queued      compiled       running          done indeterminate
            0             0             1             0             0
       queued      compiled       running          done indeterminate
            0             0             1             0             0
       queued      compiled       running          done indeterminate
            0             0             1             0             0
       queued      compiled       running          done indeterminate
            0             0             1             0             0
       queued      compiled       running          done indeterminate
            0             0             1             0             0
       queued      compiled       running          done indeterminate
            0             0             0             1             0
```

Listing 29:

```
> Sys.sleep(5) # let all processes complete
```

3.3 Combine the original data and the simulation data.

Now we fetch the results and integrate them with the other data.

Listing 30:

```
> x <- superset(
+   run=1105,
+   project='../nonmem',
+   read.output=list(read.table,header=FALSE)
+ )
> x <- x[,c('SUBJ','TIME','DV','V1','1105')]
> read.nmctl('../nonmem/1105/1105.ctl')$simulation
```

```
[1] "ONLYSIM (1968) SUBPROBLEMS=500"
```

Listing 31:

```
> x$SIM <- rep(1:500,each=nrow(x)/500)
> colname(x) <- c(V1='PRED')
> x <- x[x$`1105`==1,]
> x$`1105` <- NULL
> head(x)
```

```
  SUBJ TIME    DV    PRED SIM
2    1 0.00     . 0.00000   1
3    1 0.25 0.363 0.72558   1
```

```
4    1 0.50 0.914 1.38350   1
5    1 1.00  1.12 2.06760   1
6    1 2.00  2.28 3.48620   1
7    1 3.00  1.63 5.44660   1
```

Listing 32:

```
> nrow(x)

[1] 275000
```

Listing 33:

```
> str(x)

'data.frame':   275000 obs. of  5 variables:
 $ SUBJ: int  1 1 1 1 1 1 1 1 1 1 ...
 $ TIME: num  0 0.25 0.5 1 2 3 4 6 8 12 ...
 $ DV  : chr  "." "0.363" "0.914" "1.12" ...
 $ PRED: num  0 0.726 1.383 2.068 3.486 ...
 $ SIM : int  1 1 1 1 1 1 1 1 1 1 ...
```

Listing 34:

```
> x <- x[x$DV != '.',]
> x$DV <- as.numeric(x$DV)
```

3.4 Plot predictive checks.

3.4.1 Aggregate data within subject.

Since subjects may contribute differing numbers of observations, it may be useful to look at predictions from a subject-centric perspective. Therefore, we wish to calculate summary statistics for each subject, (observed and predicted) and then make obspred comparisons therewith.

Listing 35:

```
> head(x)

  SUBJ TIME    DV    PRED SIM
3    1 0.25 0.363 0.72558   1
4    1 0.50 0.914 1.38350   1
5    1 1.00 1.120 2.06760   1
6    1 2.00 2.280 3.48620   1
7    1 3.00 1.630 5.44660   1
8    1 4.00 2.040 2.99170   1
```

Listing 36:

```
> subject <- melt(x,measure.var=c('DV','PRED'))
> head(subject)
```

```
  SUBJ TIME SIM variable value
1    1 0.25   1       DV 0.363
2    1 0.50   1       DV 0.914
3    1 1.00   1       DV 1.120
4    1 2.00   1       DV 2.280
5    1 3.00   1       DV 1.630
6    1 4.00   1       DV 2.040
```

We are going to aggregate each subject's DV and PRED values using cast(). cast() likes an aggregation function that returns a list. We write one that grabs min med max for each subject, sim, and variable.

Listing 37:

```
> metrics <- function(x)list(min=min(x), med=median(x), max=max(x))
```

Now we cast, ignoring time.

Listing 38:

```
> subject <- data.frame(cast(subject, SUBJ + SIM + variable  ~  .,fun=metrics))
> head(subject)
```

```
  SUBJ SIM variable       min    med     max
1    1   1       DV  0.363000 1.6100  3.0900
2    1   1     PRED  0.725580 3.4797  5.4466
3    1   2       DV  0.363000 1.6100  3.0900
4    1   2     PRED -0.085238 2.2940  4.6461
5    1   3       DV  0.363000 1.6100  3.0900
6    1   3     PRED -0.022438 4.8888 12.3760
```

Note that regardless of SIM, DV (observed) is constant.

Now we melt the metrics.

Listing 39:

```
> metr <- melt(subject,measure.var=c('min','med','max'),variable_name='metric')
> head(metr)
```

```
  SUBJ SIM variable metric     value
1    1   1       DV    min  0.363000
2    1   1     PRED    min  0.725580
3    1   2       DV    min  0.363000
4    1   2     PRED    min -0.085238
5    1   3       DV    min  0.363000
6    1   3     PRED    min -0.022438
```

Listing 40:

```
> metr$value <- reapply(
+       metr$value,
+       INDEX=metr[,c('SIM','variable','metric')],
+       FUN=sort,
```

```
+       na.last=FALSE
+ )
> metr <- data.frame(cast(metr))
> head(metr)
```

```
  SUBJ SIM metric    DV      PRED
1    1   1    min 0.139 -0.615480
2    1   1    med 1.025  1.258600
3    1   1    max 2.530  2.176200
4    1   2    min 0.139 -0.351970
5    1   2    med 1.025  1.209335
6    1   2    max 2.530  2.424000
```

Listing 41:

```
> nrow(metr)
```

```
[1] 60000
```

Listing 42:

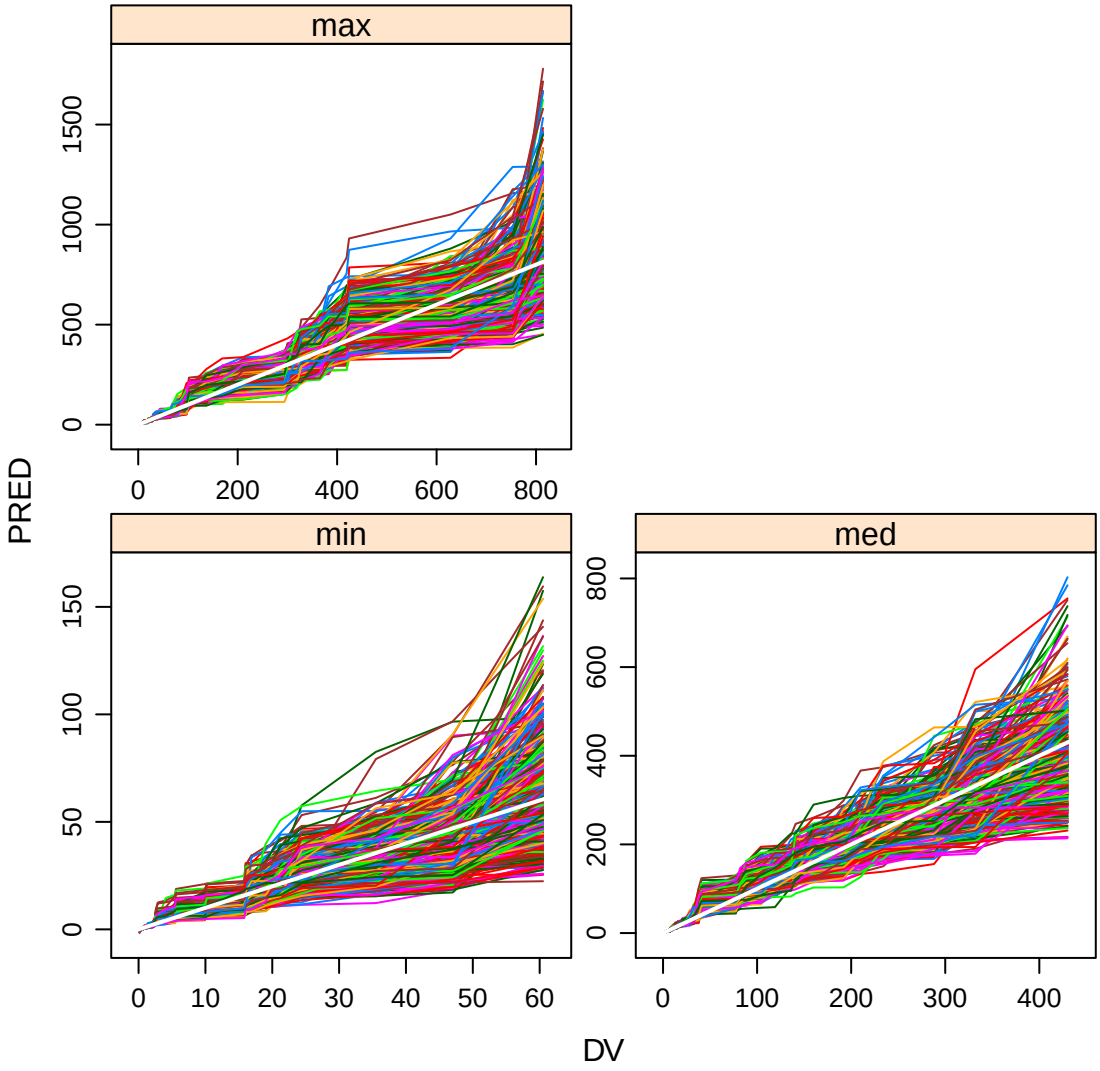
```
> metr <- metr[!is.na(metr$DV),]#maybe no NA
> nrow(metr)
```

```
[1] 60000
```

We plot using lattice.

Listing 43:

```
> print(
+       xyplot(
+               PRED ~ DV|metric,
+               metr,
+               groups=SIM,
+               scales=list(relation='free'),
+               type='l',
+               panel=function(...){
+                       panel.superpose(...)
+                       panel.abline(0,1,col='white',lwd=2)
+               }
+       )
+ )
```



For detail, we show one endpoint, tossing the outer 5 percent of values, and indicating quartiles. Technically, though, one may want to calculate quartiles befor trimming the data.

Listing 44:

```
> med <- metr[metr$metric=='med',]
> med$metric <- NULL
> head(med)
```

```
   SUBJ SIM    DV     PRED
2     1   1 1.025 1.258600
```

```
5      1   2 1.025 1.209335
8      1   3 1.025 1.579650
11     1   4 1.025 0.884860
14     1   5 1.025 1.658650
17     1   6 1.025 0.950105
```

Listing 45:

```
> trim <- inner(med, id.var=c('SIM'),measure.var=c('PRED','DV'))
> head(trim)

  SIM DV PRED
1   1 NA   NA
2   2 NA   NA
3   3 NA   NA
4   4 NA   NA
5   5 NA   NA
6   6 NA   NA
```

Listing 46:

```
> nrow(trim)

[1] 20000
```

Listing 47:

```
> trim <- trim[!is.na(trim$DV),]
> nrow(trim)

[1] 19000
```

Listing 48:

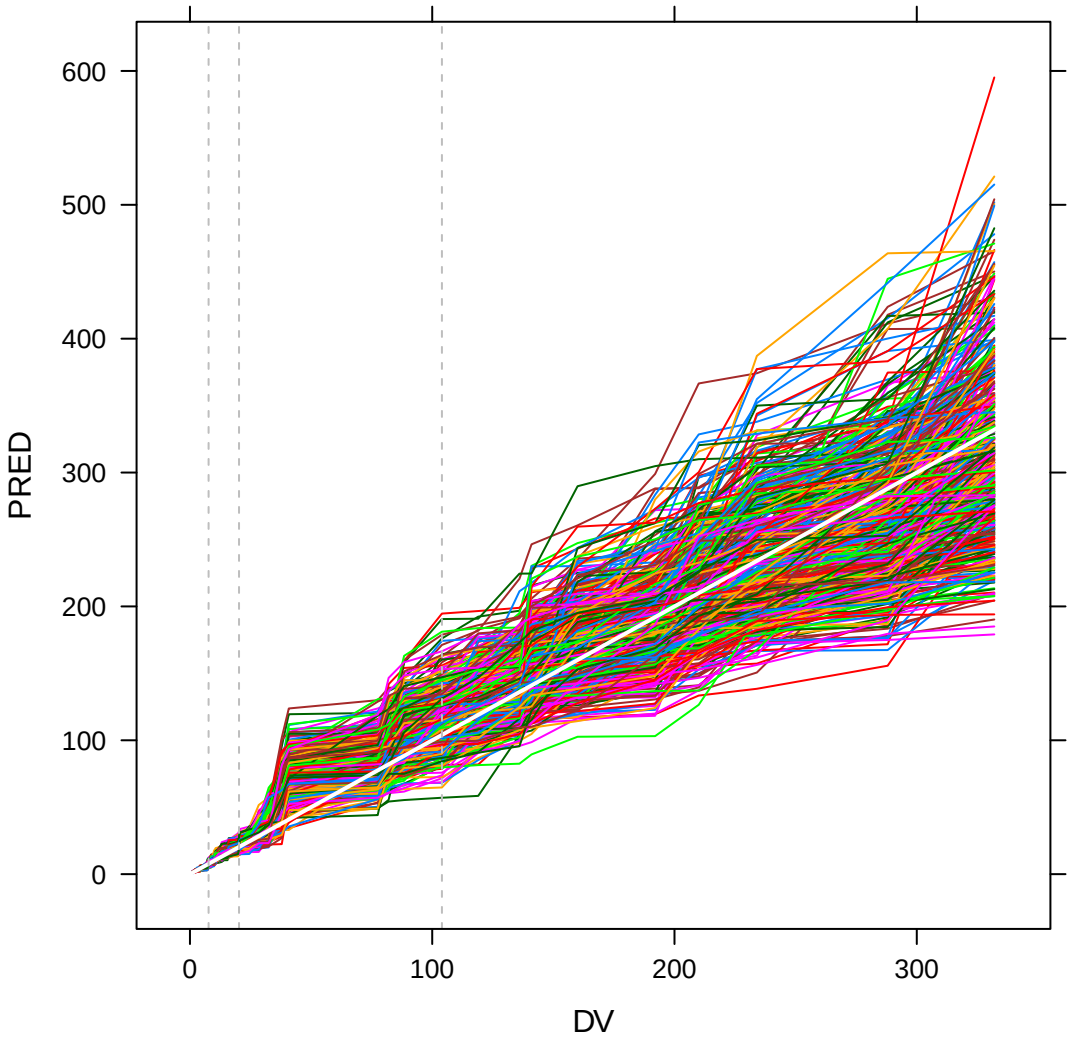
```
> head(trim)

    SIM   DV    PRED
501   1 1.13 2.05870
502   2 1.13 2.00520
503   3 1.13 1.65485
504   4 1.13 1.06910
505   5 1.13 2.05965
506   6 1.13 0.98596
```

Listing 49:

```
> print(
+       xyplot(
+               PRED ~ DV,
+               trim,
+               groups=SIM,
+               type='l',
```

```
+                panel=function(x,y,...){
+                        panel.xyplot(x=x,y=y,...)
+                        panel.abline(0,1,col='white',lwd=2)
+                        panel.abline(
+                                v=quantile(x,probs=c(0.25,0.5,0.75)),
+                                col='grey',
+                                lty=2
+                        )
+                }
+        )
+ )
```



We also show densityplots of predictions at those quartiles.

Listing 50:

```
> head(trim)
```

```
    SIM   DV    PRED
501   1 1.13 2.05870
502   2 1.13 2.00520
503   3 1.13 1.65485
504   4 1.13 1.06910
```

```
505   5 1.13 2.05965
506   6 1.13 0.98596
```

Listing 51:

```
> quantile(trim$DV)

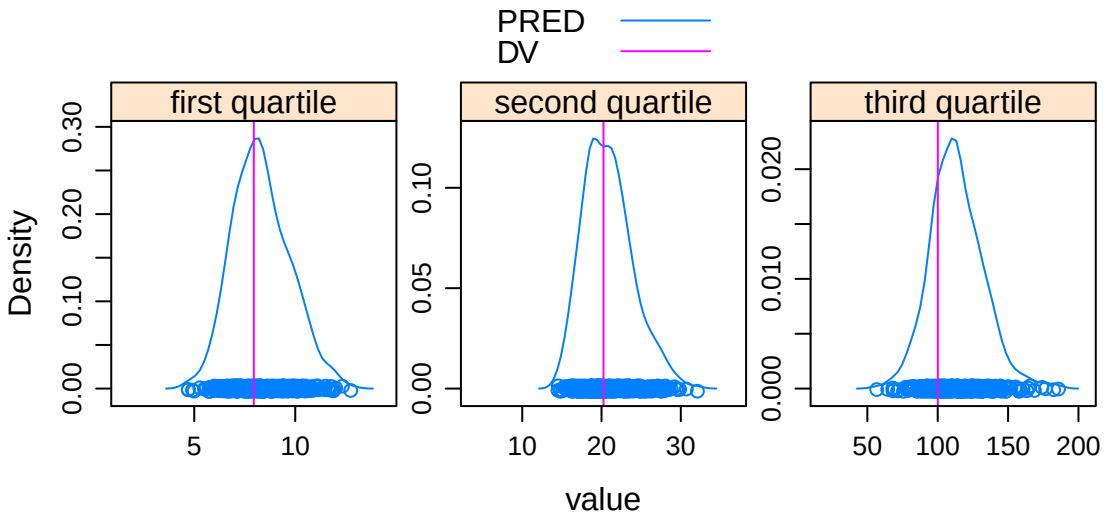
+               },
+               auto.key=TRUE
+       )
+ )
```



4 Bootstrap Estimates of Parameter Uncertainty

4.1 Create directories.

Listing 59:

```
> getwd()
```

```
[1] "/data/metrumrg/inst/example/project/script"
```

Listing 60:

```
> dir.create('../nonmem/1005boot')
> dir.create('../nonmem/1005bootdata')
> dir.create('../nonmem/1005bootctl')
```

4.2 Create replicate control streams.

Listing 61:

```
> ctl <- clear(readLines('../nonmem/ctl/1005.ctl'),';.+',fixed=FALSE)
> #ctl <- read.nmctl('../nonmem/1005/1005.ctl')
> ctl <- as.nmctl(ctl)
> names(ctl)
```

```
 [1] "prob"       "input"      "data"       "subroutine" "pk"
 [6] "error"      "theta"      "omega"      "sigma"      "estimation"
[11] "cov"        "table"      "table"
```

Listing 62:

```
> ctl$cov <- NULL
> ctl$table <- NULL
> ctl$table <- NULL
> ctl$prob
```

```
[1] "1005 phase1 2 CMT like 1004 but diff. initial on V3"
```

Listing 63:

```
> ctl$data
```

```
[1] "../../data/derived/phase1.csv IGNORE=C"
```

Listing 64:

```
> #makes nice padded run directories like 001 instead of 1 (better directory
    sorting) to be used below
> RUN <- padded(1:300)
> invisible(
+   lapply(
+     RUN,
+     function(i,ctl){
+       ctl$prob <- sub('1005',i,ctl$prob)
+       ctl$data <- sub(
+         '../../data/derived/phase1.csv',
+         sub('\\*',i,'../../1005bootdata/*.csv'),
+         ctl$data
+       )
+       write.nmctl(ctl,file=glue('../nonmem/1005bootctl/',i,'.ctl'))
```

```
+     },
+     ctl=ctl
+   )
+ )
```

4.3 Create replicate data sets by resampling original.

Listing 65:

```
>  bootset <- read.csv('../data/derived/phase1.csv')
>  r <- resample(
+       bootset,
+       names=RUN,
+       key='ID',
+       rekey=TRUE,
+       out='../nonmem/1005bootdata',
+       stratify='SEX'
+  )
```

4.4 Run bootstrap models.

Listing 66:

```
> #intentionally trying a non-existent run ... 1 should be 001 per above.
> #Parentheses force display of invisible NONR result.
> (NONR72(
+      run=1,
+      wait=FALSE,
+      grid=TRUE,
+      project='../nonmem/1005boot',
+      streams='../nonmem/1005bootctl'
+ ))

[[1]]
[1] "../nonmem/1005bootctl/1.ctl not found"
```

Listing 67:

```
> NONR72(
+      run=RUN,
+      wait=FALSE,
