1 Installation

1.1 With Rtools

The openxlsx package requires a zip application to be available to R. On windows the simplest way to set this up is to install Rtools: <https://cran.r-project.org/bin/windows/Rtools/>

During the installation of Rtools make sure to edit the system PATH.

This will add `\Rtools\bin` to the System PATH.

2 Without Rtools

An alternative way to tell R where to find zip is by setting it within the R session with, for example,

```
Sys.setenv("R_ZIPCMD" = "C:/Rtools/bin/zip.exe") ## path to zip.exe
```
